### Success with quiet laminate flooring – S.A.S. and S.A.S.+

Kronoflooring has two aces up its sleeve with the sound absorb systems S.A.S. and S.A.S.+.  
Laminate has never been so quiet.

Krono Original laminate flooring with S.A.S. and S.A.S.+ offers supreme comfort thanks to a significant reduction of reflected and transmitted sound. “Quiet” laminate flooring from Krono Original is supplied with integrated S.A.S. room sound insulation. Thanks to a thermoplastic coating, this reduces room sound by up to 50 % by converting sound energy into heat energy and absorbing sounds which are perceived as annoying. The sound becomes deeper and more pleasant to the ear.

### Kronofix S.A.S. room sound performance “very good”!

The German consumer watchdog “Stiftung Warentest” rates the room sound insulation performance of Kronofix with S.A.S. as “very good”. This is a great recommendation for the internationally patented S.A.S. sound absorption system, which incidentally renders additional underlays superfluous and makes installing laminate easy .

Admired in the industry, S.A.S.+ is a further development of S.A.S. Krono Original laminate floors with S.A.S.+ are equipped with an additional 3 mm noise-absorbing fibre mat. This green mat achieves an additional reduction in footfall sound of up to 30 % on top of the 50 % reduction in room sound provided by S.A.S. S.A.S.+ has already been registered for international patent.

Incidentally: Laminate flooring with S.A.S. is ideal for homes with warmwater underfloor heating systems. It transfers heat particularly well and is quick and easy to install thanks to Twin Clic profiling.
